

FRONTENDART

THE EXPERT IN SOFTWARE QUALITY

ABOUT THE COMPANY

FrontEndART Ltd. is a company based in Szeged (Hungary), founded by researchers of the Software Engineering Department of University of Szeged. FrontEndART Ltd. specializes in software quality assurance through automated source code analysis. The wide range of developed products revolve around accomplishing better software for a better, safer and less wasteful world.

What's great about our products?

- Accessible anytime anywhere
- No expertise required
- Always up-to-date
- Comparison to competitors
- Unique, innovative features
- Seamless usability

The company is developing the source code analysis engine called SourceMeter as well as a source code quality management platform named QualityGate. Besides these, FrontEndART has developed a very strong competence in the field of Big Data technologies, including MPP databases, distributed search engines, etc.

COMPETENCES

Software development

Java, C / C ++, C #, Angular, Android
BigData: Hadoop, Impala, Kudu, Cloudera
Agile / SCRUM development methodology

Software testing

Test design and execution
Manual testing, automation
Functional, load and security testing
ISTQB qualified team

Source code quality assurance

Products: QualityGate, SourceMeter
Source code quality assessment
Developer performance evaluation

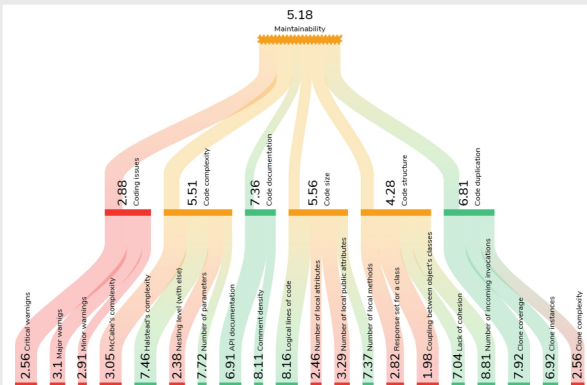

SOFTWARE QUALITY

WHAT IS SOFTWARE QUALITY?

Quality is a very complex concept in software development determined by the ISO 25010 quality model. One of its most important attributes is maintainability. Maintainability is usually defined as the effort required to change the behavior of software. The importance of source code maintainability arises from its obvious relationship to software development costs.

SOFTWARE QUALITY MODEL

FrontEndART Ltd has jointly developed a model that objectively qualifies the maintainability of the source code.

SOFTWARE RISK ASSESSMENT

Want to know the risks associated with your software?
Having doubts about the quality of your system?
Want an expert to justify your system's quality?
Want to know how to make your software better?

You can easily make erroneous management decisions if you are unfamiliar with the risks associated with the current state of your software and its environment. Such decisions can prevent you from achieving your goals and can have long-term, serious and negative consequences for your organization. We help you see clearly!

Value

Once we have identified and presented you the risks associated with your software and its environment, you will be able to combine this information with data from other sources to make more informed and comprehensive decisions. As a result, you can expect fewer negative surprises, reduced costs, and to meet your management goals more likely. These results may also enable you to outperform your competitors!

SOFTWARE RISK ASSESSMENT SERVICE

Results aiding fact-based decision making

Tangible risks identified

Based on a strong scientific background

Benchmark

Custom tailored recommendations

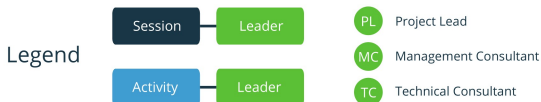

Quick results

HOW DOES THE SERVICE WORK?

The source code is completely secure, it does not get out of the customer's infrastructure!
